Language / Phonetics Assignment

2026-11-11

$$\dot{x} = \sigma(y - x),$$
$$\dot{y} = x(\rho - z) - y,$$
$$\dot{z} = xy - \beta z$$

σ=10, ρ=28, β=$\frac{8}{3}$

1 Study scope and notation

Language and variety
: English; illustrative General American conventions.

Purpose
: Practice phonemic contrasts, phonetic detail, and Unicode IPA entry.

Evidence
: Constructed teaching examples, not transcriptions of a recording. For real data, record the source, speaker variety, timestamp, task, and uncertainty.

Use angle brackets for spelling, slashes for phonemes, and square brackets for phonetic realizations: ⟨pin⟩, /pɪn/, [pʰɪn]. Choose a transcription convention and state it; detail and vowel symbols vary across accents, sources, and research questions.

2 Sound contrasts and articulatory descriptions

Table 1: Selected consonants for study; not a complete language inventory.

Symbols	Manner	Place / contrast
p b	Plosive	Bilabial, voiceless / voiced
t d	Plosive	Alveolar, voiceless / voiced
k ɡ	Plosive	Velar, voiceless / voiced
f v	Fricative	Labiodental, voiceless / voiced
θ ð	Fricative	Dental, voiceless / voiced
ʃ ʒ	Fricative	Postalveolar, voiceless / voiced
m n ŋ	Nasal	Bilabial / alveolar / velar

(1) **A vowel contrast** ⟨seat⟩ /sit/ versus ⟨sit⟩ /sɪt/. The segment contrast is /i/ versus /ɪ/; vowel length is not separately marked in this broad convention.

(2) **Contextual phonetic detail** Compare ⟨pin⟩ [pʰɪn] with ⟨spin⟩ [spɪn]. These idealized forms illustrate aspiration in one context; actual productions may have additional detail.

Refer to examples 1 and 2 by their labels when writing an analysis. An orthographic difference alone does not establish a phonemic contrast.

3 Diacritics, stress, length, and tone

Table 2: Unicode transcription features; isolated forms are symbol demonstrations.

Feature	Example	Reading
Primary / secondary stress	ˈta ˌta	Stress before the relevant syllable
Length / half-length	aː aˑ	Duration marks follow the segment
Aspiration / labialization	pʰ kʷ	Modifier letters follow the segment
Nasalization / syllabicity	ã n̩	Combining diacritics attach to a base
Devoicing / dentalization	n̥ t̪	Combining ring below / bridge below
Affricate tie bar	t͡ʃ d͡ʒ	Tie joins the two components
Tone letters	a˥ a˩ a˧˥	High, low, and rising sequences

4 Transcription worksheet

For connected speech, annotate word boundaries, reductions, assimilation, and pauses only when supported by the recording. Preserve uncertain alternatives in the notes. Do not label a broad transcription as a fully detailed narrow one.

Table 3: Record evidence and alternatives before finalizing a transcription.

Item / time	Broad form	Narrow form	Notes / confidence
Practice A	/pɪn/	[pʰɪn]	Constructed example
Recording 1	—	—	Source and timestamp pending
Recording 2	—	—	Source and timestamp pending

5 Analysis and study record

Summarize the contrast, distribution, and evidence for each proposed pattern. Separate observation from interpretation. For acoustic analysis, retain the recording metadata and analysis settings; cite figure sources and report units for duration, fundamental frequency, or formants. This template does not analyze audio, calculate acoustic measurements, or determine a transcription for you.

Unicode entry. Type or paste actual IPA characters inside `\ipa{...}`. Combining marks must follow their base character; inspect the final PDF at high zoom. The module uses Charis SIL for IPA while preserving the shared report typography. See the project README for Neovim Unicode entry and optional bibliography or plot modules.
